EDUCATION

York University

Bachelor of Science in Computer Science

Toronto, ON

2019 – Dec 2023

SKILLS

Java, Python, JavaScript, HTML/CSS, SQL, React.js, Node.js, Firebase, Selenium, Bash, REST APIs

EXPERIENCE

Quality Engineering Intern

theScore

Jan 2023 – Present

Toronto, ON

- Conducting cross-platform testing for 15 builds of Score Media and Score Bet apps (Android, iOS, and Web) to assess readiness for production releases.
- Developing test cases in **TestRail** and executed test plans to ensure high-quality feature delivery, Developed test cases for automation, resulting in 50% new automated tests being added to the suite every release.
- Collaborating with 7 cross-functional teams via **Jira** to ensure adherence to best practices and standards in QA. Maintained a defect rate of less than 40 for each release.

Software Developer

Fibra Inc.

Jan 2023 – Present

Toronto, ON

- Developing the Fibra App utilizing **React Native** to design and implement an efficient user experience designed in **Figma**.
- Created and integrated **RESTful APIs** using **Node.js** and **Firestore**, resulting in a 25 % improvement in data retrieval time and a 30% reduction in API error rates.
- Developing user authentication and security features using **Firebase Auth** and **Firestore** Security Rules, resulting in a 100% secure and private storage of user data and a 50% decrease in unauthorized access attempts.

Backend Developer

CSHub | York University

Nov 2022 – Present

Toronto, ON

- Designing and developing the backend architecture for the merch store, using SpringBoot to create robust and scalable APIs.
- Implementing business logic and optimized database queries to improve API performance, resulting in a 20% reduction in response time

FullStack Developer

yuHacks 2023 | York University

Jan 2023 – Present

Toronto, ON

- Leading the technical development team and overseeing the development of the YuHacks website and mobile app.
- Implementing the website using **React** and **Node.js** and Mobile app using **React Native**.
- Collaborating with other team members to ensure that the website meets the needs of the organization and effectively communicates with participants and sponsors.

PROJECTS

CSHub: Local Hack Day Website [↗](#) | Javascript, React.js, Bootstrap

- Designed and developed the Local Hack Day hackathon website for CSHub at York University using **React.js**, **Bootstrap** and **JavaScript**.
- Applied responsive design and user-friendly features to enhance user experience and utilized Figma to create website templates while collaborating with the team to ensure the website met the organization's needs.

Face Track Attendance [↗](#) | Python, openCV, face recognition

- Implemented a **Python** program using **OpenCV** and **face recognition** libraries to recognize faces in a webcam.
- Defined a function to generate face encodings for a list of known images and used the encodings to compare against faces detected in the video frames and saved the attendance data to a .csv file, if a match was found and timestamped with the current time.

Sorting Algorithm Visualizer [↗](#) | Javascript, React.js, HTML, CSS

- Developed a sorting visualizer that implements the Bubble Sort, Insertion Sort, and Selection Sort algorithms and uses array visualization to show the sorting process.
- Used **JavaScript** for the implementation of the sorting algorithms and **React** for the frontend.

COMPETITIONS

For The Horses [↗](#) | First-Prize | Javascript, React.js, Bootstrap

yuHacks 2022

- Lead a team of 4 to develop a web app to improve the process of matching animals in rescue centers with potential forever homes using **Node.js** and the **Express** framework.
- Implemented search feature using JSON file to store data, built organization dashboard with adopter profile creation and matching process, and added messaging feature.
